

DEVELOPER EVIDENCE PACK

The home record that keeps working after handover.

Verified Longview usage, one independently certified exact-home experience, and a measured path to a first developer pilot.

THE EVIDENCE IN ONE LINE

259 property-specific questions across 79 home contexts in four Longview developments, after excluding one explicitly identifiable internal QA home.

This pack does not claim answer accuracy, workload reduction, retention, paying customers or independent customer validation.

01 | VERIFIED LONGVIEW EVIDENCE

Real use, conservatively counted.

A read-only production audit completed on 30 July 2026 excluded one explicitly identifiable internal QA home before calculating these figures.

4**LONGVIEW DEVELOPMENTS**

Ardan View, Longview Park, Rathard Lawn and Rathard Park

79**HOME CONTEXTS**

Qualifying activity after a recorded access agreement

259**PROPERTY-SPECIFIC QUESTIONS**

With 259 recorded assistant answers in the conservative set

245**TYPED QUESTIONS**

Did not match the product's built-in suggestion prompts

133**DISTINCT NORMALISED NON-DEFAULT QUESTIONS****38 days****QUALIFYING ACTIVITY**

15 January to 29 July 2026

TRUTH BOUNDARY

These are home contexts, not a verified count of unique people, active users, customers or paying accounts.

02 | WHAT THE EVIDENCE REVEALS

Homeowners ask about the home, not just the handbook.

LEADING NON-DEFAULT TOPICS

- Solar panels and reducing energy costs
- Heating systems and EV charging
- First-year maintenance
- Paint, decoration and upgrades
- Room dimensions and layout
- Warranties
- Utilities, broadband and waste collection
- Contacting the developer
- Schools and local services
-

THE OPERATING LOOP

01 Assemble

Unit data, developer documents and system context form the home record.

02 Answer

The homeowner asks against the authorised home context.

03 Learn

Questions become aggregate topics and knowledge-gap signals.

04 Improve

The developer adds the missing FAQ or source evidence.

WHAT THIS PROVES

OpenHouse is already being used for the fabric and systems of the home, setup, aftercare and everyday homeowner decisions.

03 | TRUST AND ANSWER QUALITY

A controlled experience, tested at the data plane.

A sanitised, unoccupied show house at 8 Longview Park was independently certified on 1 August 2026.

163**TABLES PROBED**

Across the direct production REST certification

326**ANONYMOUS AND REVIEWER REQUESTS**

Zero non-empty responses and zero unexpected errors

- Exact-home reviewer binding with cross-home access denied.
- 59 authorised documents and one video in the certified home experience.
- A grounded warranty answer from a strict allowlist projection of the home record.
- Unknown and private metadata excluded, with a 3,200 UTF-8 byte cap.
- Lifecycle tests covering logout, restart, copied foreign URLs, expiry and revocation.

ANSWER-QUALITY CORRECTION

A review found that an amenities guard could replace valid home answers with a generic response. PR #205 corrects the routing and replacement boundary. Exact checkpoint 5d56e3bb passed the independent local gate and exact-SHA remote checks on 3 August 2026. It has not been merged or promoted to production.

Until a post-fix audit is complete, this pack makes no accuracy, workload-reduction or resolution-rate claim.

04 | FIRST MEASURED SCHEME PILOT

One scheme. One owner. Measures agreed before launch.

PILOT PRINCIPLE

Do not start with a portfolio-wide promise. Start with one cohort and prove a visible improvement in handover consistency, trusted homeowner guidance or aftercare visibility.

SCOPE

- Validate the unit and document input for the agreed cohort.
- Create an exact-home record for each participating home.
- Provide a branded homeowner handover and support experience.
- Ground answers in approved home records and source documents.
- Surface aggregate topics and information gaps to the developer.
- Review a short weekly evidence scorecard with the operational owner.
-

MEASURES

- Completeness of required handover evidence.
- Time from completion evidence to homeowner access.
- Question categories, evidence-backed resolution and escalation.
- Repeated information gaps corrected during the pilot.
- Defined homeowner access and return usage.
- Developer time spent on the agreed workflow, measured prospectively.
-

05 | CONTROLLED CLAIMS AND NEXT CONVERSATION

Strong enough to open the door. Honest enough to keep trust.

APPROVED

- 259 questions across 79 home contexts in four developments, after excluding the QA home.
- 245 typed questions rather than built-in prompt selections.
- Aggregate topics and knowledge gaps are surfaced to developers.
- The exact-home reviewer environment passed the recorded certification.
- OpenHouse is designed to improve handover consistency and aftercare evidence.

NOT APPROVED

- 79 unique homeowners, active users or paying customers.
- A measured answer-accuracy percentage.
- A measured reduction in calls, emails or workload.
- Measured retention or homeowner satisfaction.
- Independent validation by Longview or Bridgewater.
- Portfolio-wide enterprise readiness.

THE SIX QUESTIONS FOR A WARM INTRODUCTION

- 01 How is handover information assembled and shared today?
- 02 Where do questions, snags, warranty requests and documents live after completion?
- 03 Does the workflow stay consistent across schemes?
- 04 Which part creates the most avoidable work or customer friction?
- 05 Which upcoming scheme is the cleanest place to measure a small pilot?
- 06 Who owns implementation and who decides whether the pilot expands?

NEXT STEP

Use this evidence to earn a discovery conversation, then tailor a one-page pilot around the developer's stated workflow and one measurable scheme.
